# 1 — Concepts of encapsulation, inheritance, and polymorphism

## 2.1 – Encapsulation

Encapsulation is the way, in Java, the user can assign an **access modifier** to limit the visibility of certain attributes or methods

## 2.2 – Setter and Getter

### Setter

The setter method is a method used to make a private attribute writable by users.

### Getter

The getter method is a method used to make a private attribute readable by users.

## 2.3 – this

### this

this is an implicit parameter passed when calling a method of an object

## Lorem ipsum.

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do.

## 2.5
